Le sfide odierne

Difendere la propria infrastruttura dagli attacchi informatici è fondamentale per qualsiasi organizzazione.

Protezione degli endpoint, controllo della loro postura di sicurezza, controllo degli accessi standard e di quelli privilegiati, notifica in tempo reale di tutte le attività svolte sui sistemi critici, con un sistema di repository dei log da loro provenienti, sono solo alcuni dei requisiti necessari che devono essere coperti per ridurre e controllare il più possibile la superficie di attacco alla quale si è esposti.

Grazie a ManageEngine è possibile farlo, utilizzando diverse soluzioni le quali, essendo concepite con lo stesso framework, possono essere integrate tra loro in maniera estremamente semplice ed efficace.

Take control of your IT

Unified service management
Enterprise and IT service management platform
Single-touch workflow automation for IT and business processes
Custom workflows and lifecycle management for key ITSM practices
AI-powered virtual assistant and conversational agent
Best practice ITSM framework implementation
IT asset management with a CMDB
Single enterprise service portal for all departments
Advanced reporting dashboards and analytics

Identity and access management
Identity governance and administration
Privileged identity and access management
AD and Azure AD management and auditing
SSO for on-premises and cloud apps, with MFA
Password self-service and sync
Microsoft 365 and Exchange management and auditing
AD and Exchange backup and recovery
SSH and SSL certificate management

IT operations management
Full-stack observability
Artificial Intelligence-powered IT operations (AIOps)
End-user experience monitoring
Application performance monitoring
Cloud and Infrastructure monitoring
Network performance monitoring
Network traffic and bandwidth analysis
Network security and automation
Network change, configuration, and compliance management
DNS, IP address, and switch port management

Unified endpoint management and security
Desktop, server, and mobile device management
OS and software deployment
Automated patch management
Continuous vulnerability assessment and remediation
Web and data security
Endpoint privilege management
Next-generation antivirus
Endpoint analytics and telemetry
Remote monitoring and management

Security information and event management
Unified SIEM for cloud and on-premises
ML-driven user and entity behavior analytics
Advanced threat analytics
Cloud access security broker
Data leak prevention and risk assessment
Regulatory and privacy compliance

Advanced IT analytics
Unified insights into all of IT
AI-driven, self-service advanced analytics
Pre-built contextual reports and dashboards for 200+ IT apps
Automatic report creation through an analytics assistant
Business outcome simulations and predictions
Comprehensive SaaS management

Low-code app development
Custom solution builder
Digital transformation
Citizen development
Business and IT process management
Rebranded mobile apps
Enhance ManageEngine solutions

Monitor, manage and secure your digital enterprise with ManageEngine

Available for
Enterprise IT | Managed service providers (MSPs)
as
Self-hosted on-premises
Self-hosted in public cloud (AWS, Azure)
Zoho Cloud-native
